

UROLOGY SERVICES INFORMATION GUIDE

Urology encompasses the diagnosis and treatment of urinary tract diseases in men and women and genital tract diseases in men. The mission of Orlando Health Physicians Urology Group is to reduce your pain and discomfort, ease any anxiety and treat your medical condition as quickly and effectively as possible.

Our physicians and staff work together to provide the most comprehensive care and treatment for each patient. **Services include:**

- Robotic Surgery
- Pelvic Floor/Incontinence
- Cryotherapy
- Prosthetic Urology
- Endourology
- General Urology

Robotic Surgery

Our physicians use the da Vinci Surgical System® to perform complex, minimally invasive surgical procedures. This sophisticated system provides our specially-trained surgeons a greater range of motion and improved precision in the small, delicate spaces within the body.

Some of the leading edge procedures we offer using the da Vinci system and the conditions they benefit include:

- Partial nephrectomy for the removal of tumors in the kidney.
- Simple nephrectomy for the removal of the kidney.
- Radical nephrectomy for the removal of the kidney and other surrounding tissue.
- Cystectomy for removal of the bladder to treat patients with cancer.
- Radical prostatectomy for the removal of the prostate and surrounding lymph nodes.
- Pyeloplasty to improve impaired kidney flow.
- Sacrocolpopexy benefits female patients suffering from vaginal or uterine prolapse.
- Ureteral implant repairs the tubes connecting the bladder to the kidneys and prevents urine from backing up into the kidneys.
- Nephroureterectomy is a complex procedure to treat patients with urothelial cancer of the kidneys or ureter.

UROLOGY SERVICES INFORMATION GUIDE

Pelvic Floor/Incontinence

Our team treats patients who are experiencing incontinence and/or conditions impacting the pelvic floor, the muscles that attach the abdomen to the pelvis and provide control over bladder and bowel function. Many treatments are minimally invasive. Procedures include:

- Anterior coloporrhaphy restores the bladder to its normal position.
- Posterior coloporrhaphy tightens the back wall of the vagina and pushes the rectum back into its normal position.
- Suburethral sling offers relief from incontinence. The “sling” is positioned to support the mid-urethra.
- Bulking agents injected around the urethra help decrease urinary incontinence.
- Sacral nerve stimulation is a treatment option for bladder and bowel control.
- Intravesical botox injections are used to treat incontinence or lessen urinary urgency.

Cryotherapy

Our team is knowledgeable and specially trained to use innovative, leading edge treatments such as cryotherapy to treat urological conditions. Cryotherapy is a minimally invasive procedure that uses extremely cold temperatures to destroy malignant and benign tumors.

Prosthetic Urology

For incontinence, an artificial genito-urinary sphincter made of silicone may be implanted. The device has an inflatable cuff that fits around the urethra near the point where it joins the bladder. The cuff is inflated to keep urine from leaking. When urination is desired, the cuff is deflated, allowing urine to drain out.

For erectile dysfunction, an inflatable penile prosthesis may be inserted. This saline-filled device expands and contracts without losing elasticity.

Endourology

Our team of specialists uses minimally invasive techniques to treat kidney stones. In addition to removing these painful stones from the kidney, ureter and bladder, our dedicated team determines the cause of kidney stone development and works with the patient to prevent further episodes. Procedures performed include:

- Extracorporeal shock wave lithotripsy (ESWL) uses shock waves to break kidney stones into small pieces that can more easily travel through the urinary tract.
- Laser lithotripsy uses a small telescope and laser to break the kidney stone into tiny fragments, which are then removed by “basket” extraction.
- Percutaneous nephrolithotomy is the surgical removal of stones through a hollow tube placed into the kidney.

UROLOGY SERVICES INFORMATION GUIDE

General Urology

Our physicians and staff provide compassionate care to patients with a number of conditions and provide many treatments and procedures, which include:

- Bladder obstruction treatment
- Bladder tumors
- Circumcision
- Cystolitholapaxy
- Cystolithotomy
- Cystoscopy
- Injection of peyronies plaques
- Meatotomy
- Open simple prostatectomy
- Scrotal surgery
- Transrectal ultrasound and prostate surgery
- Ureteral dilation
- Ureteral stent placement
- Urethral stricture disease
- Vasectomy

Our Locations

Clermont

865 Oakley Seaver Dr.
Clermont, FL 34711

Dr. Phillips

7301 Stonerock Cr.,
Suite A
Orlando, FL 32819

Lake Mary

725 Rodel Cove,
Suite 201
Lake Mary, FL 32746

Orlando

32 W. Gore St.,
Suite 204
Orlando, FL 32806

Ocoee

10000 W. Colonial Dr.,
Suite 285
Ocoee, FL 34761

Oviedo
